PROFESSIONAL SUMMARY

Java Full-Stack Developer with 1.6+ years of production experience architecting high-throughput microservices using Java 21, Spring Boot, Apache Kafka, and PostgreSQL/MySQL, paired with React.js frontend delivery. Proven track record scaling mission-critical telecom provisioning and automated GST billing engines up to 500 TPS across 10,000+ daily transactions. Experienced in cloud-native containerization (Maven Jib, AWS ECR, Kubernetes) and PRD-driven AI-assisted development (OpenCode / Antigravity CLI) to accelerate feature delivery and automated test coverage.

TECHNICAL SKILLS

Languages & Core:	Java (Java 21, Java 8/17), JavaScript (ES6+), SQL, HTML5, CSS3
Backend & Microservices:	Spring Boot, Microservices Architecture, RESTful APIs, Spring Security, Spring Data JPA, Hibernate
Frontend Development:	React.js, React Router, Axios, Context API, Responsive Web UI Design
Messaging & Streaming:	Apache Kafka, RabbitMQ
Databases & Tuning:	PostgreSQL (pgAdmin 4), MySQL, SQL Query Tuning, Indexing Strategies, Transaction Management
Cloud, DevOps & Build:	Maven, Maven Jib, Docker, AWS ECR, Kubernetes (`kubectl` log monitoring), Git, GitLab CI/CD, Linux, SonarQube
Testing & AI Engineering:	JUnit 5, Mockito, Integration Testing, Postman, OpenCode & Antigravity CLI (PRD-driven workflows)

WORK EXPERIENCE

Software Engineer — Pyro Holdings Pvt Ltd

April 2025 – Present | Hyderabad, India

- Engineered and maintained 5+ production microservices using **Java (Java 21)** and **Spring Boot** for high-volume telecom provisioning, SIM inventory, and automated financial billing platforms.
- Scaled transactional throughput to **500 TPS** without data corruption or lock contention by refactoring service workflows, implementing fault-tolerant **Apache Kafka** consumers, and tuning **PostgreSQL** column indexing.
- Designed RESTful APIs and **React.js** frontend modules to deliver end-to-end financial retail, approval, and subscriber management workflows.
- Investigated production vs. client data discrepancies, authored root-cause analysis reports, and eliminated backend latency bottlenecks by **~35%** through SQL query optimization.
- Streamlined container image builds using **Maven Jib** to push lightweight images directly to **AWS ECR** (eliminating Dockerfile overhead) and monitored live deployment health via **Kubernetes** pod logs (`kubectl logs`).
- Leveraged PRD-driven AI workflows (**OpenCode & Antigravity CLI**) to accelerate module refactoring and build comprehensive **JUnit 5 / Mockito** unit and integration test suites with zero critical **SonarQube** issues.

KEY PROJECTS

1. BSNL Commission & Financial Retail Management System (MNP & Postpaid CAF)

Full-Stack (React.js GUI + Java 21 Backend)

Tech Stack: Java 21, Spring Boot, Microservices, Apache Kafka, PostgreSQL (pgAdmin 4), React.js, Maven Jib, AWS ECR, Kubernetes, JUnit 5, Mockito

- Built an end-to-end commission calculation, tax compliance, and GST invoicing platform (**React.js GUI + Java 21/Spring Boot backend**) for BSNL MNP and Postpaid CAF activations, automating D+1 payouts and reducing manual effort by **~95%**.
- Engineered registered vs. unregistered dealer tax logic (applying **CGST/SGST/IGST/UTGST** and **TDS** deductions based on state and BSNL circle) alongside a **time-series activation slab configuration table** (`effective_from`/`effective_to`), dealer discount factors, and extra volume incentives (3–5, 6–9, 10–20 activations).
- Scaled transaction processing to **500 TPS** across **10,000+ daily transactions** with **99.5% accuracy** using paginated batch fetching (500 records/chunk), PostgreSQL column indexing, and custom Kafka retry mechanisms.
- Developed role-based **React.js approval and financial retail interfaces** that integrated Kafka ERP settlement confirmation events, reducing approval turnaround from 7–10 days to 2–3 days.

2. BSNL SIM Inventory Management System (PYOTA-USIM)

Full-Stack (Modernized React UI + Backend Microservices)

Tech Stack: Java, Spring Boot, Microservices, React.js, MySQL, REST APIs, RabbitMQ, Apache POI (Excel), HTML5, CSS3

- Architected and developed the modernized full-stack **BSNL SIM Inventory Management Platform (PYOTA-USIM)** featuring an intuitive **modernized React UI** paired with **Spring Boot REST microservices** (`/createImsi`, `/deleteImsi`, `/simswap`) enabling operations teams to execute digital SIM provisioning, allocation, and cross-circle IMSI swaps.
- Implemented an automated **bulk Excel upload and ingestion pipeline** (Apache POI) with asynchronous batch parsing and strict row-level validation (15-digit IMSI, 12-digit MSISDN, circle ID, SIM type) to block invalid inventory mutations prior to persistence.
- Designed an interactive **graphical analytics dashboard** in React.js for real-time visualization of SIM inventory metrics, stock quotas per circle/SSA, allocated vs. available pools, and IMSI pairing status.
- Engineered multi-level **MSC approval gating workflows** for high-value VIP numbers and 2G/3G-to-4G SIM upgrade requests, enforcing role-based authorization to eliminate unauthorized stock reallocation.
- Engineered atomic cross-circle SIM swap transactions and asynchronous **RabbitMQ** event processing, maintaining **99.9% inventory consistency** while cutting lookup/update latency by **~35%** via SQL query optimization.

3. Centralized VAS Provisioning System (CVPS) & Consent Gateway

Backend Microservices (Pure Backend)

Tech Stack: Java, Spring Boot, REST APIs, SMPP, SS7, MySQL, SFTP

- Integrated Content Partner platforms with CVPS and Consent Gateway to orchestrate subscriber consent validation, VAS activation, auto-renewal, and fallback billing across SMS, USSD, IVR, and Web/WAP channels.
- Reduced billing failures by **~40%** through asynchronous callback handling and retry mechanisms, and automated daily CDR reconciliation via SFTP, cutting manual operations effort by **~60%**.

EDUCATION & CERTIFICATIONS

Bachelor of Technology (B.Tech) in Information Technology — Anurag Group of Institutions, Hyderabad

2019 – 2023 | GPA: 7.45

Certifications: Java Skill Certification (HackerRank) *(Open for adding React & Kafka badges)*
